

PALMER SINK LEG SYSTEM

Bun Foot model

The Palmer console leg system with ball fittings and bun foot affords a traditional and timeless feel for today's finer bathrooms. The bun foot has been a classic architectural element in fine furniture design for centuries. It was originally used on fairly massive pieces, but has found its way onto more refined case items, such as desks and chests. Its heft and solid footing provide the perfect foundation for stone and china vanity tops.

All fittings and tubing are 100% brass, with specific items such as the bun foot, concealed-screw wall flange, and leg top-cap CNC machined from solid brass rod to very exacting tolerances and exceptional surface finish. Nickel and Chrome plating is architectural-grade, consistent with the quality of premium decorative plumbing fixtures.

Palmer legs....high quality bath furniture.
